

VENTURA COUNTY FIRE DEPARTMENT LIVE FUEL MOISTURE 2019 ALL FUEL BEDS - CHAMISE

Fuels/Fire Discussion

As you can see from this chart, most of the county Live Fuel Moistures are still hovering around the critical level. The abundance of new growth post Thomas Fire at the Casitas sample site is apparent in the Live Fuel Moisture values. This evidence shows us, nature can and will recover. With the recent fire activity, we can see how the fuels react to the dry conditions we've been under. With only a chance of rain in our future, the fuels will remain vulnerably.
